drain far less  
waste water’

‘Ideal solution if  
the water supply  
is limited’

## WHAT IS POP UP3?

### **A green revolution in mobile sanitation**

POP UP3 is a modular system for mobile toilets which uses vacuum technology. This clean, reliable technology has proven itself in aviation, shipping and events all over the world for years and saves up to 90% on water, both on supply and drainage. Because the foldable system can be stacked, the transport costs also decrease by 70%. A green revolution in mobile sanitation!

### **Broadly deployable**

POP UP3 is the ideal solution for any site that needs temporary toilets. The closed drainage system is extra hygienic, so users can always count on a clean and fresh toilet. Even if the location's water supply is limited. What a relief!

### **Green choice**

Those who choose POP UP3 will benefit from the enormous savings on water and transport. A financially responsible and environmentally aware choice that goes perfectly with a sustainable business. This way, POP UP3 will give your corporate image a green boost. But even more important: your visitors will get a home feel experience using a toilet, instead of sitting on a dirty tank with...

‘POP UP3  
saves on all  
fronts’

on Facebook’

## SAVE ON WATER AND TRANSPORT

### Cleaner with less

POP UP3 uses approx. 0,8 litres of water per flushing, compared to 6 to 8 litres in a traditional system with flushing tank. Savings that yield higher quality and lower costs. The vacuum technology sucks the toilet's contents with great force, not leaving behind any traces or odors. Because it needs less water to flush, the system is never overburdened; POP UP3 can easily be used every minute. After each visit, innovative nozzles flush the toilet with water which is gushed through at high pressure.

### Three times more compact

POP UP3 consists of flexible elements of three toilets each. These elements are folded into each other according to a crafty method, resulting in an easily transportable package. As these can be stacked, a single truck can transport 99 toilets. This is almost three times as many compared to traditional mobile toilet units.

### Stackable, meaning quick deliveries

Saving 70% of all transport is not only a good thing for the environment. Another great advantage is that your mobile toilets can arrive at the intended location three times as fast. Even in areas that are difficult to reach, because the compact system can be transported so easily. This is crucial in emergencies, but also very convenient in other cases.
